

# EPFLOOR NF40(MTR)

3 to 6 mm chemical and abrasion resistant resin rich epoxy floor screed

## Description:

EPFLOOR NF40 (MTR) is a three part solvent-free combination of epoxy resin, modified amine hardeners filled with specially graded and selected high crushing strength, chemically inert aggregates. It is laid by trowel as durable chemical resistant screed at approximately 3-6 mm thickness. This nominal thickness provides an impervious topping which is highly chemical resistant by the very careful choice of amine curing agent and graded aggregate. The system includes two pack epoxy resin primer and EPFLOOR NF40 (MTR) which are both supplied in pre-weighed units ready for on site mixing and application. The finished, cured floor has a slightly granular texture of uniform self-color. It is laid by trowel at approximately 3-6mm thick depending upon the requirement. It is highly chemical and abrasion resistant.

## Uses:

- Floor topping with exceptional resistance to the surface mechanical wear and attack from chemical spillage
- To get a safe non-slip finish for personnel and vehicular traffic
- For heavy engineering plants, chemical handling and process areas, steelworks, dairies, breweries, oil refineries, paint workshops, battery rooms, plating factories, sugar and food industries
- Widely used for areas of lighter duty where above average durability and low maintenance costs are required

## Advantages:

- Resistance to abrasion and to a wide range of chemicals
- Good gripping surface to both vehicular and pedestrian traffic
- Designed for easy laying to a fair finish
- Close textured surface, No need for over coating
- Successful use proven in a wide performance variety of aggressive locations

## Product Standard Compliance:

- IS 9162-1979
- ISO 4624:2016

## Company Standard Compliance:

## Technical Information:

Properties	Specification
Appearance	Brown liquid
Pot life	30 min
Initial hardness	16 hours
Compressive strength	75N/mm <sup>2</sup>
Flexural strength	26N/mm <sup>2</sup>
Tensile strength	12N/mm <sup>2</sup>

Bond strength	3.0N/mm <sup>2</sup>
Abrasion resistance	3 mg/ cycle
Hydrochloride Acid 10%	Excellent
Sulphuric acid 10%	Excellent
Nitric acid 10%	Excellent
Lactic acid 10%	Excellent
Citric acid 10%	Excellent

**Application Procedure:**

It is essential that EPFLOOR NF40 (MTR) is applied to sound, clean and dry surfaces in order that maximum bond strength is achieved between the substrate and the flooring system

**New concrete:** Laitance deposits on new concrete floors are best removed by light grit blasting, mechanical scrubbing or grinding

**Old concrete:** Again mechanical cleaning methods are strongly recommended on old concrete floors particularly where heavy contaminations by oil and grease has occurred or existing coatings are present.

**Steel Surfaces:** Should be degreased and sand blasted immediately prior to application.

Add the aggregate slowly to the mixed resin and hardener, continue mechanical mixing for a further 2-3 minutes, until all the components are thoroughly blended.

The mixed EPFLOOR NF40 (MTR) should be spread to uniform thickness on the primed surface using a steel trowel.

The material should be tamped with a wooden float to ensure complete compaction and finally finished to a closed even texture using a steel trowel.

**Temperature resistance:**

EPFLOOR NF40 (MTR) can resist temperature up to 80°C.

**Coverage:**

Depends on thickness of work.

**Packaging:**

EPFLOOR NF40 (MTR) is supplied in 15 Kg pack.

**Storage & Shelf-life:**

EPFLOOR NF40 (MTR) have a shelf life of 12 months when stored in a dry place below 35°C.

**Health & Safety:**

EPFLOOR NF40 MTR should not come in contact with the skin and eyes, or be swallowed. Ensure adequate ventilation and avoid inhalation of vapours. Some people are sensitive to resins, hardeners and solvents. Wear suitable protective clothing, gloves and eye protection. If working in confined areas, suitable respiratory protective equipment must be used. The use of barrier creams provide additional skin protection. In case of contact with eyes, rinse immediately with plenty of clean water and seek medical attention immediately - if swallowed seek medical attention immediately - do not induce vomiting.

	It is the practice of increasing efficiency with which buildings use resources- energy, water and materials-while reducing building impacts on human health and the environment.
	ISO 45001 is the world's international standard for occupational health and safety, issued to protect employees and visitors from work-related accidents and diseases.
	ISO 9001:2015 is a globally recognized standard for quality management systems (QMS). It helps organizations of all sizes and sectors to: Improve performance, Meet customer expectations, Demonstrate commitment to quality, and Identify and improve processes that lack consistency.
	ISO 14001 is the internationally recognized standard for environmental management systems (EMS). It provides a framework for organizations to design and implement an EMS, and continually improve their environmental performance
